DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species 1 shown in Figure 3

Species 2 shown in Figure 4

Species 3 shown in Figure 6

Species 4 shown in Figure 27

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Art Unit: 3679

Species 1: claims 2, 3, 4

Species 2: claims 2, 3, 5

Species 3: claims 2, 3, 6

Species 4: claim 7

The following claim(s) are generic: 1, 8-11.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Species 1 discloses a shelf connector wherein the sliding sleeve is formed into a closed structure, and the inner wall of the hole encircling the sliding sleeve is provided intermittently with positioning ribs. Species 2 discloses a shelf connector wherein the sliding sleeve is formed into an open structure, and the inner wall of the sliding sleeve opposing the open groove is axially provided with a hinge functioning as a shaft-and-pin mechanism. Species 3 discloses a shelf connector wherein the inner wall of the hole encircling the sliding sleeve is provided with a layer of soft rubber, or the whole inner wall of the hole is a rough surface. Species 4 discloses a shelf connector wherein the clasping portion is a protruding clasping portion, the locking groove being provided with a locking edge for restricting movement of the locking sleeve along the radial direction of the sliding sleeve. Each of Species 1, 2, 3, and 4 discloses a shelf connector comprising a different special technical feature. Accordingly, the species do not relate to a single general inventive concept since the species lack the same special technical feature.

4. A telephone call was made to Kao H. Lu, Esq. on September 21, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael P. Ferguson whose telephone number is (571)272-7081. The examiner can normally be reached on M-F (6:30am-3:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel P. Stodola can be reached on (571)272-7087. The fax phone
